

Spirally Pinned Opening Beater

Spirally pinned opening beater for previously supplied Crosrol (UK) Chute Feed units, utilizing replaceable Aluminum lags and newly developed Beater roll bearing sealing arrangement.

The new style Beater with helically positioned opening pins ensures that the fibre tufts are evenly stripped from the wired feed roll resulting in much improved opening of individual tufts together with an improved material fill into the Lower Batt formation chamber thus enabling a constant and even feed of material to the Card.

Parts included in the Change Kit: -

- Spirally Pinned Beater Roll assembly including Pinned lags, Support rings and drive shaft.
- New style Beater roll end shrouds including seals so as to protect Bearings from dust contamination.
