

ABS Card Extraction System

Improved cleaning efficiencies can be achieved by the fitting of the aerodynamically designed Plastic extraction duct system. Suitable for Over-head extraction cards only, the new system results in much reduced cleaning schedules together with a higher Dust removal efficiency from the Card sliver.

Dependant upon the Card model, the Specific design may vary from the picture shown.

Multi point waste extraction with Individual clean and dirty waste collection enables re processing of usable fibers.

Efficient continuous suction system, results in reduced air extraction volume and filtration requirements. Transparent duct sections enable visual Inspection / monitoring of system performance.

Magna duct provides user-friendly secure magnetic fixings / release of suction ducts.

Parts included in the Change Kit: -

- ABS Extraction Duct main bodies (Clean & Dirty waste).
- Specific clear Duct arms made from ABS utilizing the Magna connection joints.
- Sheet metal connection ducts where applicable.
- Full instructions on how to assemble the new Extraction ducting to your existing Carding machine.
